Design out the box

Theme Park

CONTEXT
Your design company and engineers have been commissioned by the 'Tussards Group' to design a new type of theme park to rival Alton Towers. The style and theme of this new park is entirely up to you and your designers.
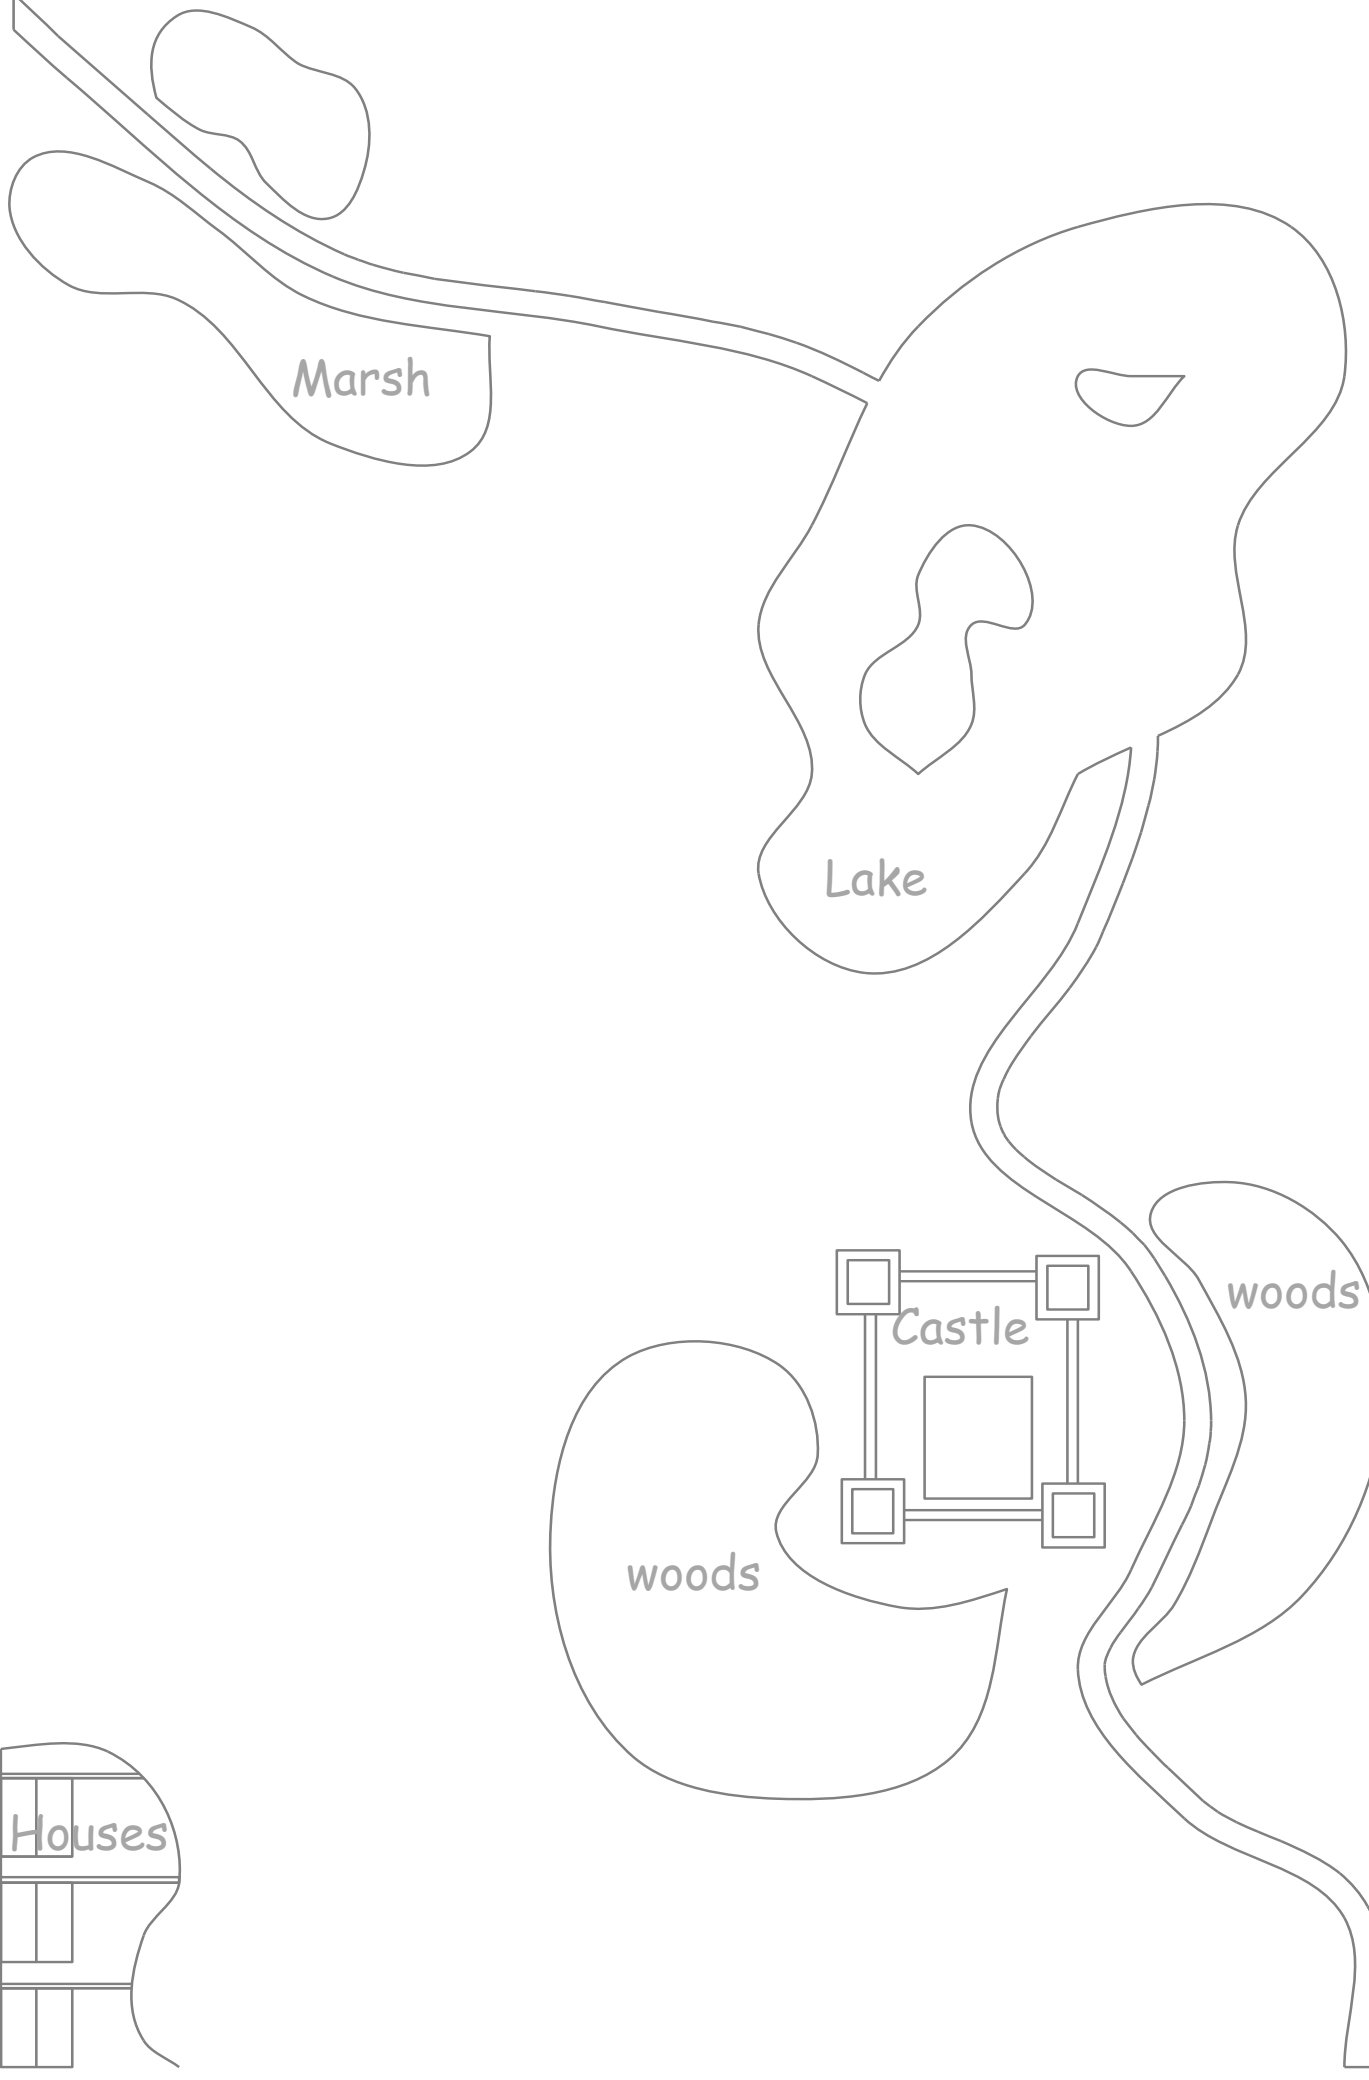

The park must include up to date rollercoaster rides and water features for the younger generation and more sedate rides for the older generation and young children. The park must include all the usual features of a theme park, café's, restaurants, shops, arcades, boating lake, stalls, theatre, cinemas, toilets, car park, etc.

DESIGN TASK
The New adventure theme park MUST have a theme and the rides must be based around that theme. Camelot was based around a Medieval theme, American Adventure is based around the Wild West.

The Company has provided a map of where the Theme park is to be based and its up to you if you wish to use the Marsh land, rivers and other features to your advantage or you can work around them. The company may also wish you to model your idea in 3D CAD.
