

Design out the box

Concept Stadium

Context

When the runner lights the torch at the Olympics opening ceremony, its flame will have been on an incredible journey: a journey that began in Ancient Greece, where the roots of the Olympic and Paralympic Games lie, and ends in the host nation - where over one billion people across the world will watch the flame signal a unique transformation.

The Olympics will not only change the lives of the competing athletes - it will regenerate the landscapes and communities of the host nation, and inspire people throughout the world in the Olympic and Paralympic spirit.

Design Task

Istanbul, Tokyo and Madrid are in the process of developing their proposals to host the 2020 Olympics. One of these countries have hired you to develop designs for their stadiums that will host the athletics, swimming and cycling. The cycling will also include a BMX track. Your designs will be the difference between success and failure. Show what has inspired your ideas. Good luck.

Zaha Hadid is one of the worlds most innovative designers and has been involved in lots of concept architecture and was responsible for the London 2012 awe inspiring aquatics center based around a sting ray or waves. What were the other stadiums or buildings inspired by?
