

Design out the box

Air Cruise Ship

CONTEXT

Fifty years ago, no one thought cruise ships would evolve into 1,200-foot behemoths capable of carrying 5,000 passengers. Cruise ships are monsters of the ocean, but could they eventually conquer the skies too? From race tracks to rollercoasters, skydiving and mega slides, cruise ships are a lesson in entertainment. But the future of cruise ship travel could be even more mind-blowing

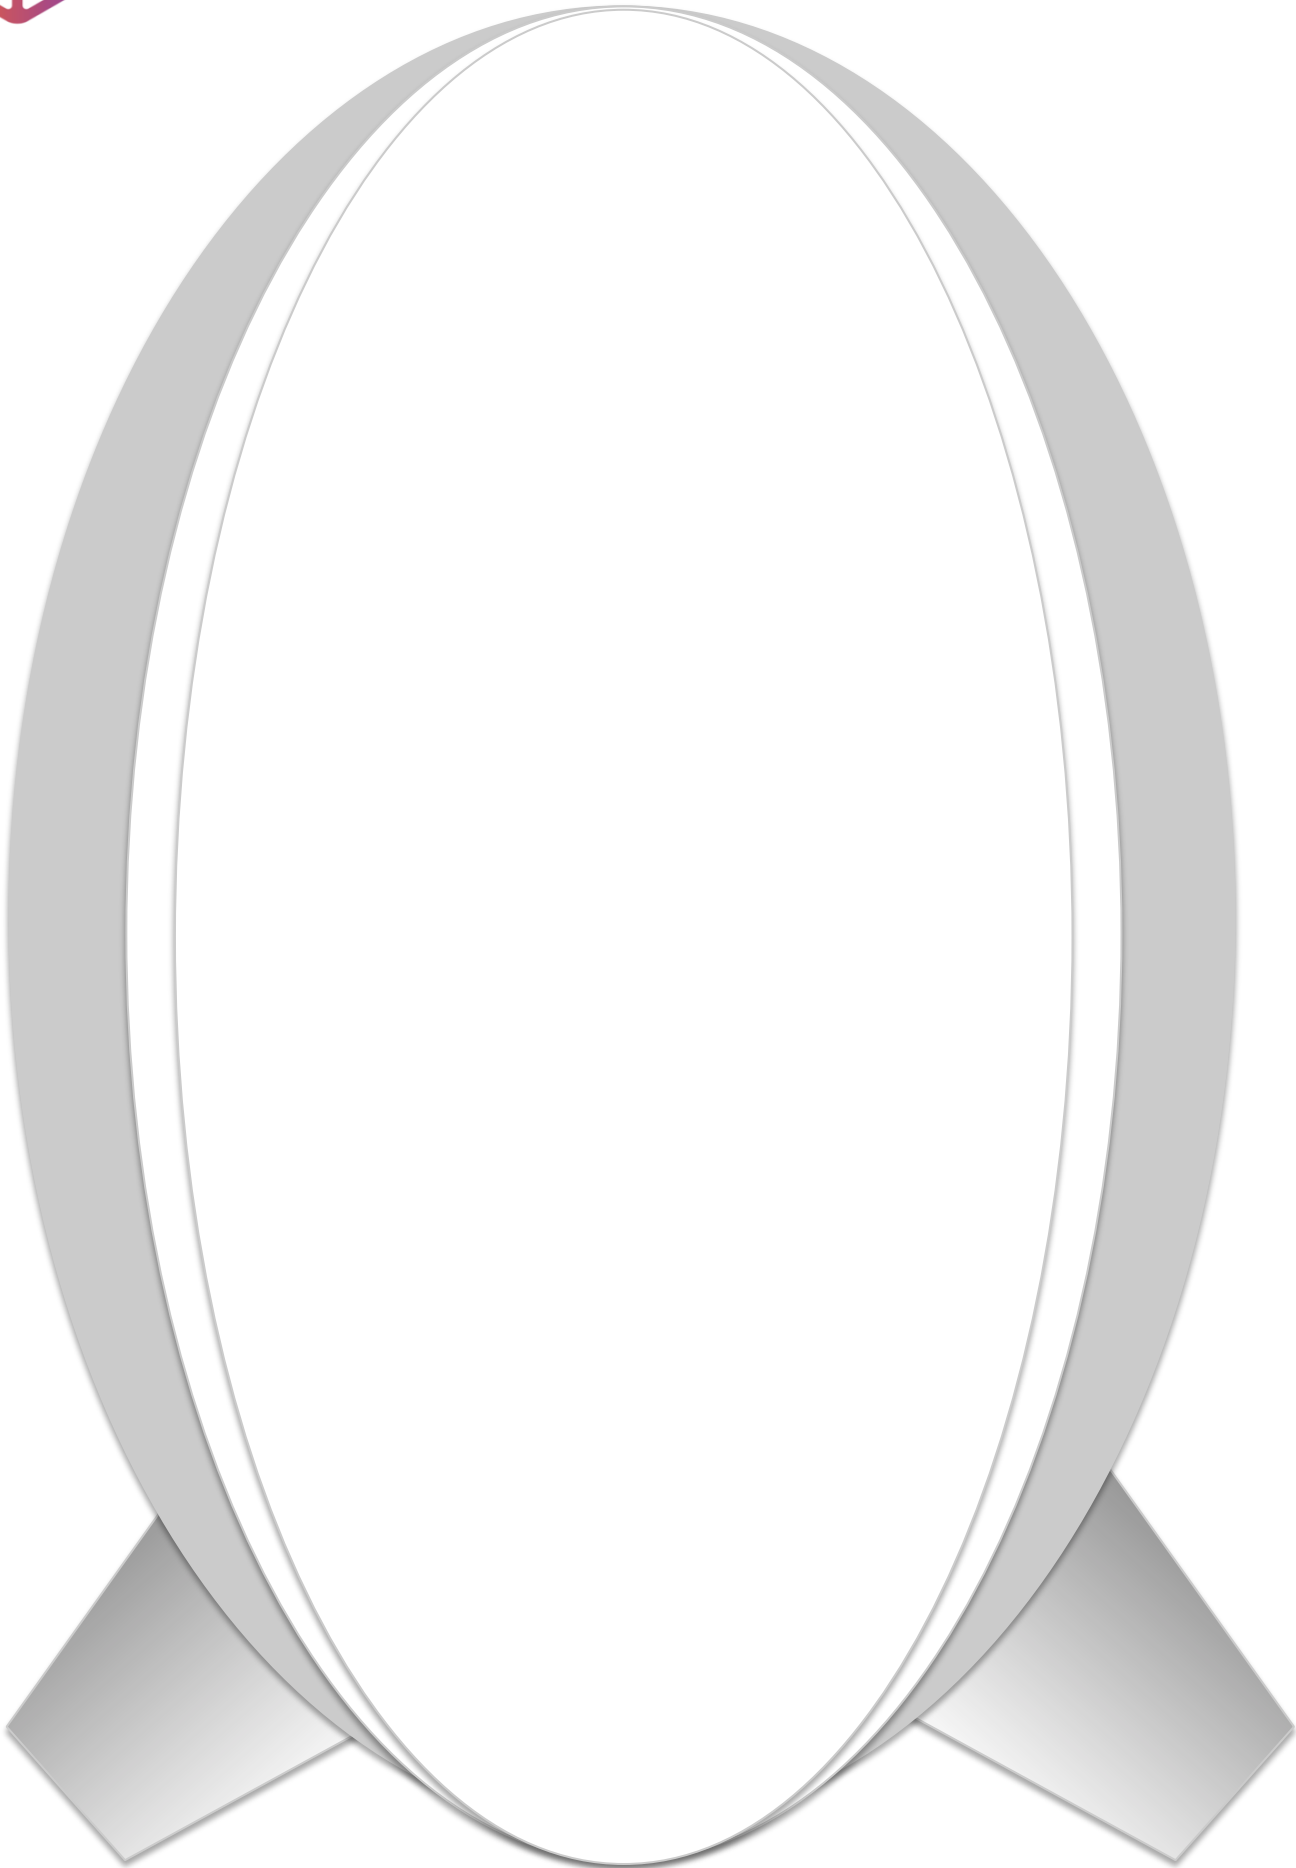

DESIGN TASK

Airbus have tasked your team to design the top deck of a cruise ship of the sky. Use the airframe shown on the opposite page. The top deck will be the same size as a supersized cruise ship and should accommodate 100's of people. They are not bothered about weight or how the plane will operate at this present moment in time. They are only after conceptual futuristic drawings of what an cruise aircraft could possibly look like?
